Dear Member of Michigan's Legislature,

I have seen the evidence entered into the Antrim County court case of a computer algorithm interfering with votes cast in the 2020 election across nine Michigan counties—Antrim, Barry, Charlevoix, Grand Traverse, Livingston, Macomb, Oakland and Wayne. This algorithm affected votes and statewide election results. This same algorithm was identified in all Ohio counties as well as the states of Pennsylvania, Florida, Texas and Colorado.

Voters not computer algorithms should decide elections.

In December, the people of Michigan came to this body and asked the Legislature to investigate irregularities that occurred in 2020 election before certifying the result. This body failed to do so. An algorithm working through our voting machines to affect election outcomes changes things. This is unacceptable and we will no longer tolerate inaction on this issue. It's not OK to look the other way. Transparent, free and fair elections must now come before politics.

As a concerned legal voting citizen, I demand that the Michigan Legislature immediately order an independent full forensic audit of the 2020 election in these nine counties—to include the paper ballots, digital images and full examination of the voting machines. We will not take no for an answer. It's time for you to do your job or Michigan will become the next Venezuela.

I will be watching to see what you do. Do the right thing this time.
